INTRODUCTION.

The present volume contains the results of the meteorological observations made at the Central Meteorological Obsrevatory and the other local stations in Japan for the year 1929.

All the observations and computations have been conducted uniformly, according to the Instructions issued by the Central Meteorological Observatory. Among the Instructions, the following points are specially to be noticed :—

Time used.—The Central Standard Time (civil mean time of the Meridian 135° E.) is adpoted at all the localities, except in Taiwan (Formosa) and Manchuria (C. S.T. at Ryojun) where the Western S. T. i.e. civil mean time of the Meridian 120° E. is used. For the measure of sunshine duration the apparent solar time is used.

Pressure.—The barometric readings given in millimetres are reduced to freezing point only; the corrections for mean sea level and standard gravity are given at the respective page.

Temperature.—The temperature are given in Centigrade degrees; these below zero are shown by adding 100, to avoid the minus sign; thus 99° stands for −1°, and 95° for −5°, etc.

Velocity of the Wind.—As the wind velocity at the hour of observation is taken the mean velocity for the preceding 20 minutes. Since January 1st of the year 1925 a new factor for the Robinson anemometer has been used. The ratio of new factor to the old one is 0.7/1.0.

Clear and Cloudy Days.—The mean amount of cloud for a clear day is less than 2 exclusive and that for a cloudy day is more than 8 inclusive.

風速一秒時間十米以上ヲ觀測シタル日ヲ暴風日トス

Days with Gales.—By the day with gale is meant a day on which the maximum wind velocity reaches or exceeds 10 metres per second.
